Finalization

Specify root detection parameters and

On this step you can set specific item (person) as root of hierarchy or user login for user profile.

If you leave Root ID or advanced rule empty, root will be detected based on

Root ID

Filtration rule

```
function(itemData) {  
    //You can get field values like this: itemData["Field Name"]  
    //Example: return itemData["Department"]  
    return true;  
}
```
